AIM: To build an anonymous ftp scanner using ftplib module in python.

FTP Scanner:

A tool that automatically scans IPs/hosts for active FTP servers. It tests connectivity and credentials, reporting successful logins and vulnerabilities.

ftplib:

A built-in Python library for working with the File Transfer Protocol (FTP). It allows connecting to FTP servers, logging in, listing directories, and transferring files.

ALGORITHM:

1. Start.
2. Import the `ftplib` module.
3. Specify the FTP server hostname.
4. Connect to the FTP server.
5. Log in using the username **anonymous** and password **anonymous**.
6. If the login is successful:
    - Display the login status.
    - Display the server's welcome message. ● Display the directory listing.
7. Close the FTP connection.
8. If the login fails, display an error message.
9. Stop.

PROGRAM:

```
import ftplib def

anonymous_login(hostname):

   try:

      # Connect to the FTP server

ftp = ftplib.FTP(hostname)

      # Login using anonymous credentials

response = ftp.login('anonymous', 'anonymous')

print(response)
```

```
        # Check whether anonymous login is successful
if "230" in response:
            print("\n[*] FTP Anonymous Login Succeeded.")
print("Server:", hostname)              # Display welcome
message              print("\nWelcome Message:")
print(ftp.getwelcome())              # Display directory
listing              print("\nDirectory Listing:")
ftp.dir()
        # Close the FTP connection
        ftp.quit()     except Exception as e:
print("Error:", e)         print("\n[-] FTP
Anonymous Login Failed.")
# Main Program hostname =
"ftp.be.debian.org"
anonymous_login(hostname)
```

SAMPLE OUTPUT:

```
230 Login successful.
[*] FTP Anonymous Login Succeeded.
Server: ftp.be.debian.org
Welcome Message: 220
FTP Server Ready
Directory Listing:
drwxr-xr-x   2 ftp ftp
4096 Jan 10 2026
debian drwxr-xr-x   2 ftp
ftp     4096 Jan 10 2026
```

cdimage drwxr-xr-x 2

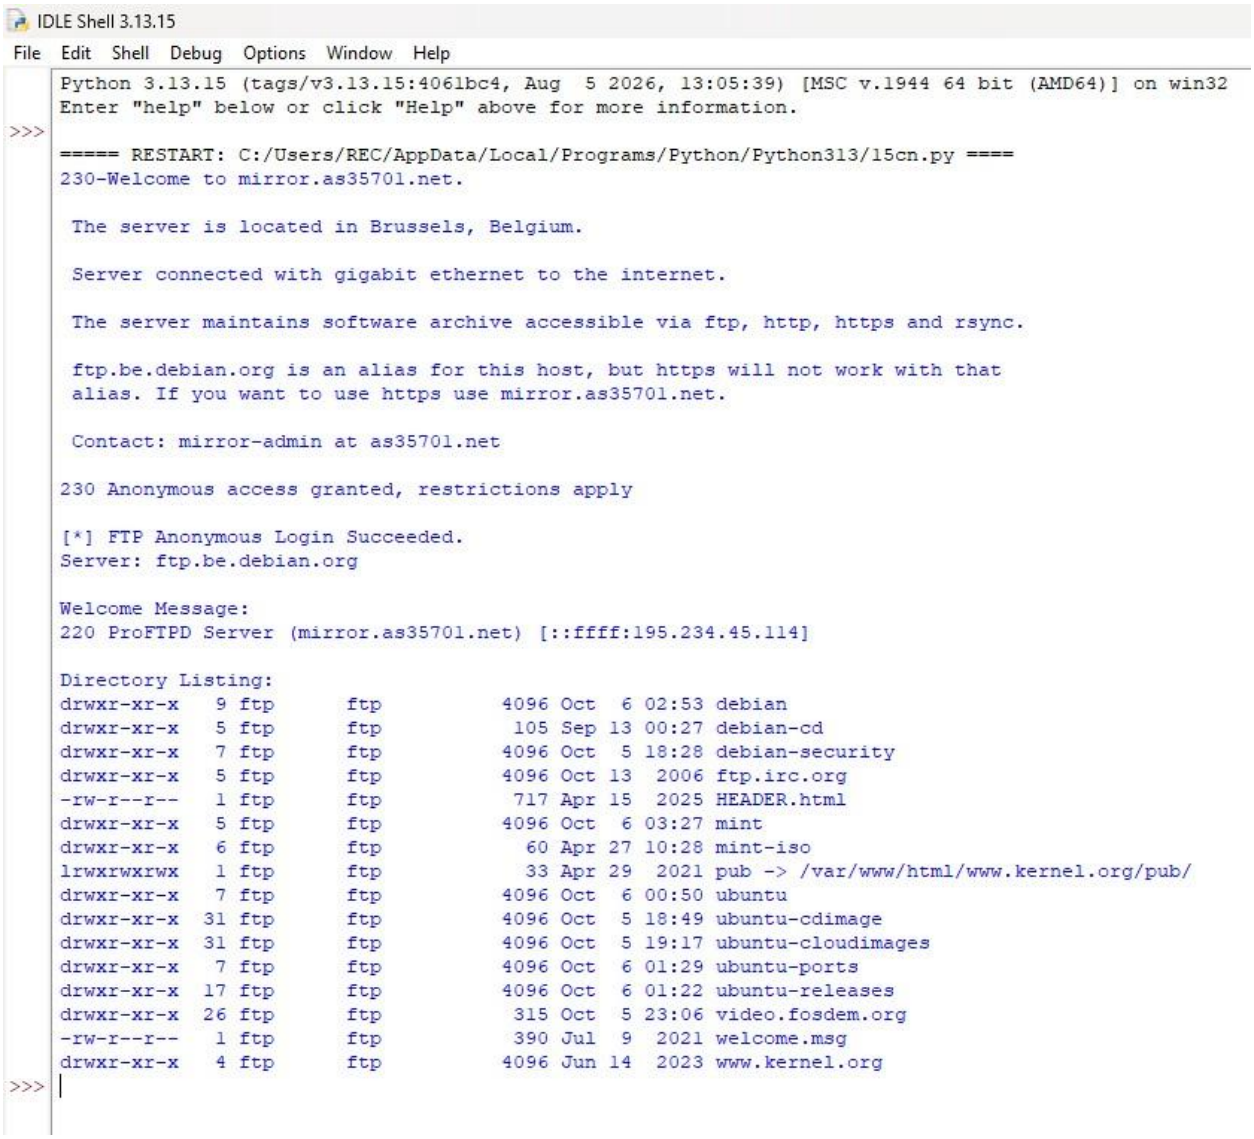

ftp ftp 4096 Jan 10

2026 project

-rw-r--r-- 1 ftp ftp 512 README.txt

221 Goodbye.

OUTPUT:

RESULT: Thus an anonymous ftp scanner using ftplib module was built and executed successfully.
